

Quorve Labs

Systems that survive contact with production.

Bangalore, India · Remote US / EU · US mornings / EU afternoon, IST
quorvepvt@gmail.com · quorve.in

POINT OF VIEW

We run a small Bangalore studio that sells outcomes, not bench hours. You talk to the people who write the code. We take AI product work, Go and Node backends, and cloud that is boring on purpose — then we stop at a 4-week MVP when that is the honest scope. Overlap is US mornings and EU afternoon, IST. English on the call, in the PR, and in the runbook.

CORE COMPETENCIES

01

AI product development

A working product loop, not a ChatGPT wrapper.

02

Backend & API engineering

An API with a contract, not a folder of handlers.

03

Cloud & DevOps

Deploys you can explain, bills you can defend.

04

Full-stack web apps

A product slice people can click, not a design system.

05

MVP in 4 weeks

Something a founder can put in front of users in 28 days.

DIFFERENTIATORS

- Founders write the code. No junior handoff on a scoped sprint.
- Written appetite before a commit: in, out, price, and calendar.
- Retrieval cites sources or refuses. Empty hits do not invent.
- Kubernetes only when traffic, isolation, or a platform team asks.
- Thirty-day warranty on scoped work. Foreground IP assigns on full payment.

TEAM

Arpit Chokniwal

Co-founder & principal engineer

Saloni Rathod

Co-founder

HOW TO BUY

Minimum project \$8,000

Hourly \$55–\$85

Default 4-week MVP \$18k — one user type, one loop

Overlap US mornings / EU afternoon, IST

Book: <https://quorve.in/book>

STACK

Go · TypeScript · Python · Node.js · PostgreSQL · Next.js · AWS · GCP · Docker · Terraform · Kubernetes · OpenAI

Selected systems

Anonymized systems we can name before an NDA. Architecture and LLD are on the site.

PII · GENERATION

Synthetic data platform

Detect once, generate many

A production pipeline that scans documents and schemas once, writes a masking blueprint, then fans out synthetic copies with human review, vaultless tokenization, and an agent tool bus.

Python · FastAPI · Temporal · GLiNER · MCP · Kubernetes

<https://quorve.in/work/synthetic-data>

INGEST · RETRIEVE

Knowledge assistant

Cite-or-refuse retrieval

Three deployables: a document ingest pipeline into vector search, an orchestrator API, and a chat client. Answers are generated from indexed chunks, not from a naked prompt.

Python · FastAPI · Azure Functions · AI Search · TypeScript

<https://quorve.in/work/knowledge-assistant>

LANGGRAPH · TRACE

SRS generator

Six-layer generate ' trace loop

Retrieve tickets, wiki pages, and indexed docs, then generate a structured software requirements spec. Features become tickets, gaps close the loop, traceability stays read-only.

Python · FastAPI · LangGraph · Chroma · React
